

We claim:

1 1. A system with enhanced water flux through a filter membrane, the system
2 comprising
3 an electromagnetic radiator which produces high-power, pulsed blackbody, deep-ultraviolet
4 radiation, the UV reactor having at least one fluid inlet and at least one fluid outlet and having at
5 least one treatment chamber;
6 a filtration membrane, the filter membrane disposed adjacent the at least one fluid outlet of
7 the electromagnetic radiator to filter the water irradiated with the pulsed blackbody, deep-UV
8 irradiation, wherein the precipitation of inorganic molecules and organically complexed minerals,
9 partial or complete mineralization of organic molecules and the deactivation or destruction of
10 microbes caused by the oxidizing species reduce the transmembrane pressure.

1 2. The system of Claim 1 wherein the filtration membrane constitutes a microfiltration
2 membrane.

1 3. The system of Claim 1 wherein the filtration membrane constitutes of a plurality of
2 membranes.

1 4. The system of Claim 1 wherein the oxidation of water matrix by the pulsed
2 blackbody UV yields ozone, hydrogen peroxide, and hydroxyl radicals.

1 5.. The system of Claim 1 further comprising pump and associated valves for
2 backwashing the filtration membrane.

///

1 6. The system of Claim 1 further comprising a pre-filter disposed between the
2 electromagnetic radiator and the inlet to the filter membrane.

1 7. The system of Claim 1 in which the electromagnetic radiator comprises a lamp
2 which develops a radiant exitance of between about 40,000 W/cm² to about 170,000 W/cm².

1 8. The system of Claim 1 in which the electromagnetic radiator comprises a lamp
2 which develops a peak power output of between about 2 MW to about 6 MW.

1 9. The system of Claim 1 in which the electromagnetic radiator comprises a lamp
2 which radiates electromagnetic energy at wavelengths between about 185 nm to about 3,000 nm.

1 10. The system of Claim 9 in which about 38 percent to about 52 percent of the output
2 electromagnetic energy has wavelengths in the range of between about 185 nm to about 400 nm.

1 11. The system of Claim 1 in which the electromagnetic radiator is pulsed at a rate of
2 between about 0.1 to about 30.0 pulses per second.

1 12. A method for enhancement of flux through a hollow fiber-type filter membrane, the
2 method comprising the following steps:

3 treating the water to be filtered by exposure to pulsed blackbody, deep-UV electromagnetic
4 radiation prior to purifying the water with the hollow fiber-type main filter membrane to prevent
5 fouling of the membrane by the group of contaminants of water consisting of organic molecules,
6 metal ions and complexed minerals.

1 13. The method of Claim 12 further comprising the step of backwashing the main
2 filtration membrane.

1 14. The method of Claim 13 in which the step of treating the water with radiation lasts
2 for 30 minutes.

1 15. The method of Claim 12 further comprising the step of pre-filtering the water prior
2 to filtration of the water through the main filter membrane.

1 16. The method of Claim 12 in which the electromagnetic radiation develops a radiant
2 excitance of between about 40,000 W/cm² to about 170,000 W/cm².

1 17. The method of Claim 12 in which the electromagnetic radiation develops a peak
2 power output of between about 2 MW to about 6 MW.

1 18. The method of Claim 12 in which the electromagnetic radiation has wavelengths
2 between about 185 nm to about 3,000 nm.

1 19. The method of Claim 13 in which about 38 percent to about 52 percent of the
2 electromagnetic energy has wavelengths in the range of between about 185 nm to about 400 nm.

1 20. The method of Claim 12 in which the electromagnetic radiation is pulsed at a rate of
2 between about 0.1 to about 30.0 pulses per second.
